Plug in to CRD's DEC-11® system

When you plug in to Charles River Data Systems' DEC-11 computer systems, you're getting engineering excellence built-in. Available in a variety of configurations, our powerful, multi-user general purpose computers are equally at home as R&D systems, or as the basis for business and process control systems.

Our computer systems: LSI-11/2 or LSI-11/23, with 16 or 32K words of MOS memory. Peripherals include a 21 megabyte system; single- or double-sided drive (1 or 2); and a 3M card, a fail-safe back-up of the Windows. Options include serial and parallel I/O as well as A/D and D/A converters. Available include RT-11, RS-232C.

Typical Configurations

MF-211, with:
- LSI 11/2 Processor
- 32K words MOS
- Dual Floppy System
- DLV-11J Quad Serial Interface

MF-211, with:
- LSI-11/23 Processor
- 64K words MOS
- Dual Floppy System, RX02 Equivalent
- DLV-11J Quad Serial Interface
- 8 Quad Slot Backplane
Plug in to CRDS for complete DEC-11 systems

Our computer systems are based on the DEC LSI-11/2 or LSI-11/23, with from 32K to 128K words of MOS memory. Peripherals available on the systems include a 21 megabyte Winchester fixed disk system; single- or double-sided Shugart floppy disk drives (1 or 2); and a 3M cartridge tape system for fail-safe back-up of the Winchester disk. Hardware options include serial and parallel interfaces, as well as A/D and D/A converters. Software systems available include RT-11, RSX-11, and U/V6 (UNIX*).

Whichever configuration you need for your most demanding applications, you are assured of plugging in your systems because CRDS delivers most parts.

Check our product features and specifications with CRDS Marketing at (617)655-1800. We will discuss the specifications and price of the configuration that's right for you.

Typical Configurations

**MF-211, with:**
- LSI 11/2 Processor
- 32K words MOS
- Dual Floppy System
- DLV-11J Quad Serial Interface

Price: $6480.00

**MF-211, with:**
- LSI-11/23 Processor
- 64K words MOS
- Dual Floppy System, RX02 Equivalent
- DLV-11J Quad Serial Interface
- 8 Quad Slot Backplane

**HD-11 Winchester Drive with 21 megabyte capacity**

**NOTE:** Optional DE1 cartridge tape back-up for HD-11 can be ordered in lieu of the Dual Floppy System.

Price: $15,755.00
are based on the DEC com 32K to 128K words available on the sys-
Whichever configuration you choose, you're assured of the power, flexibility and reliability you need for your most demanding applications. You're also assured of plugging in your system last, because CRDS delivers most products in 30 days!
Check our product features inside. Then call CRDS Marketing at (617)555-1800. We'll be happy to discuss the specifications and help you choose the configuration that's right for you.

9-11 Winchester Drive with 21 megabyte capacity

NOTE: Optional DE1 cartridge tape back-up for HD-11 can be ordered in lieu of the Dual Floppy System.

Price: $15,755.00
Plug in to our complete line of components, you plug in to innovative, reliable solutions to your system design problems. Combined in any number of configurations, these parts form our powerful, cost-effective computer systems. And each component can be purchased separately to expand or complete an existing system.

**MF-211**

**RX02 Equivalent Dual Floppy System with LSI-11/2 or LSI-11/23**

The MF-211 system combines DEC's LSI-11/2 or LSI-11/23 with the Shugart SA800 flexible disk drives, all within a 10½" rack mountable enclosure. The CRDS controller provides for dual density operation and complete software/media compatibility with DEC's RX02 floppy disk system. Functionally identical in operation to DEC's 11V03L, the MF-211 can be used in a variety of system applications utilizing any of the DEC-11 based software packages, such as RSX-11M or RT-11. The MF-211 system uses DEC H9270 4-quad slot backplane, with an 8-quad slot backplane available as an option in the same 10½" enclosure.

The Standard MF-211 System Contains:

- DEC LSI-11/2 or LSI-11/23 central processor
- Dual floppy disk system, using industry standard Shugart SA800 floppy disk drives with a combined capacity of one million bytes and built-in write-protect.
- Rack mountable slides
- On-off circuit breaker
- Power supply with needed +5V and +12V power for 4-quad slot or 8-quad slot backplane. Includes options for 110V or 220V, 50Hz or 60 Hz.
- 32K to 128K word MOS memory with self-contained refresh.

**Options Available with MF-211:**

- Any DEC system components used with the LSI-11/2 or LSI-11/23 microprocessors, including—but not limited to:
  - KEV-11 Extended Arithmetic Unit
  - DLV-11F Serial Link Unit
  - DLV-11J Quad Serial Link Unit
  - Cables for DLV-11F & DLV-11J
  - DRV-11 Parallel Interface
  - KWV-11A Programmable Clock
  - Terminals for the MF-211, such as video terminals, printers, etc., can be obtained from DEC or local distributors. Terminals must have either RS232 interface or 20mA current loop interface.

NOTE: For terminals for the MF-211, such as video terminals, printers, etc., can be obtained from DEC or local distributors. Terminals must have either RS232 interface or 20mA current loop interface.
Reliability, software compatibility, solid field performance, and compact packaging are just a few of the key features of the CRDS approach to system design. Read the following specs for further information. Then call CRDS Marketing at (617)855-1800. Today. The sooner you plug in to CRDS, the sooner you’ll plug in your DEC-11 system.

Software

- **RT-11 Single User Operating System**
  RT-11 is a small, single-user disk operating system designed for interactive program development and on-line applications on the PDP-11/LSI-11. RT-11 supports both single job and foreground/background modes of processing. The foreground/background monitor allows two programs, a foreground program and a background program, to operate concurrently. The real-time function runs in the foreground, which has priority on use of system resources. Functions that do not have critical response time requirements (program development, for example) run in the background, which operates whenever the foreground is not busy.

  In addition to a variety of system and program development utilities, RT-11 offers optional support of a number of high-level language processors, including FORTRAN IV, FOCAL, APL, and BASIC.

- **U/V6 General-Purpose Interactive Operating System Based on UNIX**
  U/V6 is a general-purpose, interactive operating system which offers a number of features seldom found even in larger operating systems. Some of these features include:
  - A hierarchical file system incorporating demountable volumes
  - Compartmental file, device and inter-process I/O
  - The ability to initiate asynchronous processes (tasks)
  - User alterable system command language
  - Over 100 subsystems including a dozen languages

U/V6 languages include:
- C
- FORTRAN
- Reflex
- Basic
- Desk Calculator

U/V6 is the Yourdon, Inc. packaging of the highly successful UNIX operating system.

- **RSX-11M Real-Time Operating System**
  RSX-11M is a disk-based real-time operating system which runs on certain PDP-11's and the LSI-11/23 processor. It provides an environment for the execution of multiple real-time tasks using a priority structured event-driven scheduling mechanism. System generation allows the user to configure the software for systems ranging in size from small 16K word systems to 128K word systems.

  RSX-11M can be generated as either a mapped or unmapped system, depending on whether the hardware configuration includes a Memory Management Unit. If the configuration does not include hardware memory management, the system can support up to 30K words of main memory. If the configuration does include hardware memory management, the system can support up to 124K words of main memory. RSX-11M provides the same primary services in mapped and unmapped systems; however, some optional features require hardware configurations larger than the minimum supported systems.

*UNIX is a trademark of Bell Laboratories.
HD-11

RL01 Equivalent Winchester Disk with Cartridge Tape Back-up

The CRDS HD-11 is a 21-megabyte formatted fixed disk system that utilizes Winchester technology to achieve high storage capacity at low cost. It is compatible with both the LSI-11/2 and LSI-11/23 processors manufactured by Digital Equipment Corporation, and is software equivalent to four RL01 disk drives.

The HD-11-T includes an optional tape drive, providing the system with a removable medium. This 3M Cartridge Tape Drive may be used to provide back-up or archival storage. The tape drive mounts inside the HD-11 chassis and utilizes the same power supply and controller/interphase as the disk drive.

This unique packaging of a disk and tape drive in the same chassis—sharing common electronics—is a revolutionary concept in the minicomputer field. Combining the new, fast and inexpensive non-removable disk technology with another new technology, the 3M cartridge, provides a method of fail-safe disk drives or allowing large off-line storage (tape libraries) to be created. Error correction (ECC) has been implemented on both the tape and disk peripherals for further reliability.

The HD-11 is completely software compatible with the RL01, allowing immediate and easy use of the product. No handlers need to be integrated into your operating system, and the HD-11 executes DEC's RL01 disk diagnostics.

Key Features:
• 21 megabyte formatted disk storage
• RL01 instruction set compatible
• Built in bootstrap loader
• ECC data protect on both disk and tape
• Q-bus and Unibus compatible
• Four write-protect switches
• High-technology controller prevents latency while using bandwidth more efficiently
• 2-way peripheral for most cost-effective, reliable approach to storage applications.

Disk Drive

CRDS selected Shugart Associates' SA4000 as its source for Winchester drives. This drive has been in production for over one year. It is a relatively simple and straightforward 14 inch drive that does not strain either the limits of Winchester technology or the availability of media and other components.

A band-driven head-actuation assembly provides substantial reliability at a low cost. Compared to voice coils with servos and/or track following logic, this approach is simpler and less costly.

Unlike removable media drives, the SA4000 requires no cumbersome air filtration system. Through the use of fixed media, problems of dust and dirt contamination are eliminated.

The SA4000 represents superior technology by a company that has clearly proven itself by its domination of the floppy disk market. This Winchester disk has already seen its first year of production and is in use by several leading OEM customers.

Tape Drive

The 3M tape cartridge featured in the HD-11 is manufactured by Data Electronics, Inc., and has been in production for over 2 years. It has extensive field experience in small business systems environments.

The removable tape cartridge is a convenient size, is easily stored, and has a formatted data capacity of 15.7 megabytes, or the equivalent of 3 RL01 disk packs. This tape drive is not software compatible with any DEC peripheral.

We suggest that the device be used to back up an entire RL01 disk equivalent, and to restore this tape back onto the disk at a later time. Either operation can be performed in less than six minutes per RL01 unit, and it is not necessary to introduce a new handler into the operating system. A completely independent program is provided to the user, allowing tailoring or restoration of from one to three 5-megabyte RL01 sections, in a maximum of only 6 minutes per RL01 section.
As an added capability, the FD-211 and the MF-211 can be obtained with double-sided, double-density floppy disk drives, thus offering one megabyte of RX02 equivalent storage per drive. Using Shugart SA850 drives, these double-sided systems are designated the FD-411 and MF-411 and are software compatible with DEC's LSI-11/ PDP-11 series. The system is completely transparent for single-sided media operation. A simple SYSGEN of RT-11 allows double-sided operation. A diskette with a modified RT-11 handler is supplied with each purchased FD-411 or MF-411. This handler allows each of the two drives to be a one megabyte device when a double-sided diskette is in the drive. If a single-sided diskette is installed, the device will appear as a 500K byte device.

**Features:**
- Hardware, software and media compatible with LSI-11 and PDP-11 series
- One megabyte of storage per drive
- Bootstrap loader, formatter and self-diagnostic with each system
- Latest version of Shugart SA850 double-sided drives
- 3 ms track-to-track access

**FD-211**

**RX02 Equivalent Floppy Disk System**

The FD-211 Double Density Floppy Disk System is totally instruction-set compatible with the Digital Equipment RX02 Floppy Disk System. It provides a compact, low-cost and highly reliable solution for all RX02 applications.

This low-profile, 5¼” enclosure houses two floppy disk drives, each providing up to 512K bytes of formatted storage plus the power supply. Controller/interface electronics are contained on one, dual-height card using only half a quad slot of the Q-bus backplane, and a full quad slot of the Unibus backplane. This contributes to the low cost and reliable system performance with reduced interwiring.

**Controller Card Features:**
Each FD-211 Controller Card offers all of these features:
- Interface, bootstrap and formatter electronics on a single DEC-compatible card
- Complete software/media compatibility with DEC RX02 for Q-bus or Unibus
- Single- and double-density operation with each system
- DMA data transfer on per-sector basis
- Formats sector headers
- Formats single- and double-density marks which allows user to modify density selection of diskettes
- Self-diagnostic
- Bootstrap loader functions automatically on power-up
- Cyclic redundancy check
- 2901 microprocessor controller allows RX02 emulation plus additional "smart" functions

**Enclosure Features:**
- 5¼” panel height
- Front panel write-protect switches
- On-off circuit breaker
- Modular construction for easy replacement of drives or power supply
- Shugart SA800 series drive with:
  - LED's on each drive to indicate read or write operation
  - Sensor for detection of write-protect hole on diskettes
  - Automatic head unload

**NOTE:** Double-sided drive operation is available in the FD-411, providing 2 million bytes of storage. See section entitled “Double-Sided Floppy Disk Option”.
- Power supply with optional 110V or 220V AC Input, 50 or 60 Hz operation
- 10 foot ribbon cable

<td>$7,780.00</td>
<td>$7,000.00</td>
</tr>
</tbody>
</table>

### MF211 OPTIONS

- E: Extended backplane: an 8 quad slot backplane is supplied in place of the standard four quad slot backplane | $575.00 | $515.00 |
- V25: 220V/50Hz Operation Option | $50.00 | $50.00 |

**NOTE:** For Double-Sided Drive Operation, use the designation MF411 in lieu of MF211 and add the shown price to the total system price. A diskette with RT11 handler for Double-Sided Operation is provided.

### HOW TO ORDER

To order your configuration of the MF211 or MF411, simply add any of the above option suffixes you desire separated by hyphens to the product designation. For example:

- MF211-Q23-E designates an MF211 with an LSI-11/23, 64K word memory and with an 8 quad slot backplane at the standard US power input of 110V/60Hz.

**PAYMENT TERMS & CONDITIONS**

**TERMS:** Net 30 Days (upon Credit Approval)

**FOB:** Natick, MA 01760

Discounts apply to units scheduled out over a twelve month period, with 1/3 of total number of units scheduled for delivery within the first six months.

OEM quantity discounts available on request.

Prices subject to change without notice.

**WARRANTY**

All equipment purchased directly from CRDS, it's authorized representatives and/or franchised Distributors is warranted on "return-to-factory" basis against defects in workmanship and materials under normal and proper use in its unmodified condition for a period of ninety (90) days from date of initial shipment. As a condition of this warranty, Customer must (1) obtain a CRDS Return Authorization (RA) number, (2) ship the equipment (or sub-assembly) to the designated CRDS Repair point, transportation prepaid, and (3) include with the returned equipment (or sub-assembly) a WRITTEN description of the claimed defect. Transportation charges for the return to Customer on in-warranty repaired equipment (or sub-assembly) shall be paid by CRDS within the fifty (50) United States, District of Columbia, and Canada. Returns to customer of out-of-warranty repaired equipment (or sub-assembly) shall be "Transportation Collect". If CRDS determines that the equipment (or sub-assembly) returned to it for warranty correction is not defective as herein defined, Customer shall pay CRDS all costs of handling and transportation. All repaired or replaced equipment shall be returned only to Customer and not to third parties to whom Customer may have sold, leased or otherwise transferred the equipment. The warranties provided herein are exclusive to the Customer only.

Charles River Data Systems, Inc., hereby warranties all equipments (or sub-assemblies) of first party manufacturers and/or their authorized, franchised representatives and distributors against defects in workmanship and materials, only to the full limits and extent that such items are warranted by CRDS.
